

Supplies for activities needed:

- Construction Paper
- Scissors
- Popsicle Sticks
- Glue/Tape

Activity Name: Shape Scavenger Hunt

- School Readiness Outcomes (SRO) goals met:
 - Sorts different items together based on one common similarity
- Instructions
 1. Cut out shapes out of the construction paper first. Some common shapes to use are circles, triangles, squares, etc. They should be big enough so that you can cut a smaller shape out on the inside of it.
 2. Next, cut out the shape, but smaller, in the inside of your cut out shape. (The video shows some examples of how this may look) Your children may need your help with this step.
 3. Then, glue a popsicle stick to the bottom of your cut out shape and you now have a shape magnifying glass!
 4. Have your children search around the house for shapes using their shape magnifying glasses.
 - a. Talk with them about how they know that it's that shape (i.e. "How do you know that's a square?")
- Extension Activity Ideas
 - You can even have your children use the objects to perform a little skit! This could be done by having them find one object of each shape that is small enough for them to hold (ex: a book for rectangle) and have them give each shape a name and let them tell a story with their new shape characters.
 - It might look like this:

“This is Sally the book! I like to sit at the library all day and help people get information.”

- Challenge them to make their own stories with their characters.
